ROUGH DRAFT DISCLAIMER

THE STENOGRAPHIC NOTES TAKEN IN THIS PROCEEDING ARE BEING TRANSLATED INSTANTANEOUSLY INTO THEIR ENGLISH EQUIVALENT THROUGH AN AUTOMATED PROCESS CALLED REALTIME TRANSLATION. THIS TRANSCRIPT HAS BEEN NEITHER EDITED NOR PROOFREAD BY THE COURT REPORTER.

THE REALTIME DRAFT IS UNEDITED AND UNCERTIFIED AND MAY CONTAIN UNTRANSLATED STENOGRAPHIC SYMBOLS, AN OCCASIONAL REPORTER'S NOTE, A MISSPELLED PROPER NAME, AND/OR NONSENSICAL WORD COMBINATIONS, DEPENDING UPON THE COMPLEXITY OF THE DEPOSITION AND THE SPEED OF THE QUESTIONS AND ANSWERS.

ALL SUCH ENTRIES WILL BE CORRECTED ON THE FINAL CERTIFIED TRANSCRIPT, WHICH WILL BE DELIVERED TO YOU IN ACCORDANCE WITH STANDARD DELIVERY TERMS, OR ON AN EXPEDITED BASIS SHOULD YOU DESIRE FASTER DELIVERY.

DUE TO THE NEED TO CORRECT ENTRIES PRIOR TO CERTIFICATION, THIS ROUGH REALTIME DRAFT CAN ONLY BE USED FOR THE PURPOSE OF AUGMENTING COUNSEL'S NOTES AND NOT TO USE OR CITE IT IN ANY COURT PROCEEDING AS THE ORIGINAL, CERTIFIED TRANSCRIPT, NOR TO DISTRIBUTE IT TO ANY OTHER PARTIES -- CCP 2025.540 (b) .

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 BY MR. CHAN:

3 Q Let me know when you have that document
4 open.

5 A I have it open on my computer.

6 Q If you can turn to page 86 --

7 A 86.

8 Q -- under the section 5.1.1?

9 A Sorry. 86 in the document, not in the
10 file.

11 Okay. I am page 86, 5.1.1.

12 Q Under section 5.1.1 titled "Construction
13 of Single Acting Cylinder."

14 Do you see?

15 A I see that.

16 Q And it reads:

17 "Generally, a single acting cylinder is
18 made of the following elements, including two end
19 covers. One may be an integral part of the
20 cylindrical tube."

21 Do you see that?

22 A I -- give me one second.

23 Are you reading the first paragraph
24 under the title?

25 Q Correct.

ROUGH DRAFT 15

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 A Okay. I see one. Great. Please
3 continue.

4 Q Now, are you aware of those end covers
5 being part of the housing of the cylindrical
6 device that you were just talking about?

7 MR. BOWEN: Objection. Asked and
8 answered.

9 THE WITNESS: Am I aware of them being
10 part of the housing? They're certainly part of
11 the assembly. The definition of a housing might
12 be a little bit vague for me at this point. I see
13 the same -- I see the cross-section that you're
14 pointing out and I see the end covers, and they're
15 certainly part of the assembly. If you want to
16 call them part of the housing, I'm not going to
17 object to that.

18 BY MR. CHAN:

19 Q Okay. But here, the definition says:
20 "Two end covers. One may be an integral
21 part of the" -- excuse me -- "cylinder tube."

22 Do you see that?

23 A I do see that, yes.

24 Q Do you have any reason to dispute that
25 definition or assembly?

ROUGH DRAFT 16

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 A No, I don't.

3 Q If you skip a few lines, it also reads:

4 "The end covers are fitted to the body
5 by four cover screws or tie rods."

6 Do you see that as well?

7 A I see that as well.

8 Q Do you have any reason to dispute the
9 statements?

10 A None whatsoever.

11 Q Dr. Spanos, what shape is the cap
12 generally?

13 (Simultaneous colloquy.)

14 MR. BOWEN: Objection. Scope.

15 Go ahead.

16 THE WITNESS: Well, I mean, certainly it
17 has what you call the cylindrical symmetry. It's
18 a kind of a form that's created by rotation of a
19 surface, if that's what you're asking. One cap
20 has to have a hole to allow the piston to go
21 through it. If I'm reading this correctly, I
22 think No. 7 is a cap here if I'm reading it
23 correctly.

24 BY MR. CHAN:

25 Q Great.

ROUGH DRAFT 17

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 A But please, continue.

3 Q So the question is actually very simple.

4 Is the shape of the cap limited to being
5 cylindrical?

6 A The shape --

7 (Simultaneous colloquy.)

8 MR. BOWEN: Sorry.

9 THE WITNESS: Apologies. I'll give time
10 for objections as we go on.

11 THE COURT REPORTER: I didn't hear the
12 objection, though.

13 MR. BOWEN: Objection. Scope.

14 Thank you.

15 THE WITNESS: I do not know the answer
16 to that. I'm looking at this particular diagram.
17 This particular diagram doesn't tell me otherwise,
18 that the cap might or might not be cylindrical.
19 It may or may not be. It might have, for example,
20 some indentation for alignment purposes, or it
21 might be a hexagonal on the outside so you can
22 turn it with a wrench.

23 BY MR. CHAN:

24 Q So the -- sorry. I didn't mean to
25 interrupt before you finished.

ROUGH DRAFT 18

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 A Air is not gas? Well, it's not a single
3 gas. It's a mixture of various gases, yes.

4 Q Okay. If the pneumatic cylinder were to
5 be defined as only a gas cylinder, is that a
6 correct construction?

7 A You mean by that, excluding the
8 possibility of operating a pneumatic cylinder with
9 air?

10 Q That's right, as only a gas cylinder.
11 Do you agree with that construction?

12 A I do not. As an engineer, I think a
13 pneumatic cylinder, depending on the circumstances
14 of applications, can very nicely operate on air as
15 well.

16 Q Thank you.

17 Conversely, if a pneumatic cylinder were
18 to be defined as only an air cylinder, is that a
19 correct construction?

20 A It is not.

21 Q Dr. Spanos, I recall the specification
22 describes the pneumatic cylinder as having a shaft
23 49.

24 Do you remember that?

25 A Shaft 49? Yes. Are you referring to

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 figure 2, I presume. Yes.

3 Q That's right.

4 A Yes, I do.

5 Q What does a shaft mean to you?

6 A Shaft is a -- is a mechanical element.

7 It's usually a rod that is used to transfer
8 motion.

9 (Reporter clarification.)

10 THE WITNESS: Yes. Sometimes, this
11 motion is rotational. Sometimes this motion is
12 linear. In this case, I think we're referring to
13 the latter, to linear motion.

14 BY MR. CHAN:

15 Q In your opinion, is a shaft the same as
16 a rod?

17 A No. The two words do not mean the same.
18 But a shaft is usually a rod, but a rod is not
19 always a shaft.

20 Q What does a rod mean to you, then?

21 A A rod is generally used to describe a
22 shape which is usually an item that has some
23 length and some diameter. And that's how people
24 would describe it.

25 Q Is a piston a shaft?

ROUGH DRAFT 27

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 A Not necessarily.

3 Q Is a piston a rod?

4 A I don't think engineers will describe it
5 as such.

6 Q Can I direct your attention back to
7 Exhibit 22.

8 A Okay.

9 Q Let me know when you're there.

10 A On page 87.

11 Q Let me know when you're there.

12 A Okay.

13 Q In figure 5.1 (b), do you see the piston
14 rod labeled as referenced in numeral 11?

15 A Okay. Yes, I do.

16 Q And that rod has three portions. The
17 middle portion is the expanded portion with a
18 wider diameter, whereas the portion to the left as
19 well as the portion to the right each have a
20 diameter that is smaller than the middle portion?

21 Do you agree?

22 A I do see that, yes.

23 Q Do you view piston 11 as a rod or a
24 shaft?

25 MR. BOWEN: Objection. Vague.

ROUGH DRAFT 28

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 describe that shape -- that the trajectory of the
3 stone takes as curvilinear.

4 BY MR. CHAN:

5 Q Dr. Spanos, does specification say that
6 the rod of the pneumatic cylinder must travel in a
7 linear path?

8 A I'm sorry. I do not have a clear
9 recollection of that. Is it mentioned anywhere?
10 I believe the examples are such, but I don't know
11 if it limits it to that.

12 Q Let me put it another way.

13 Does the specification say that the rod
14 of the pneumatic cylinder must travel in a
15 straight line?

16 MR. BOWEN: Objection. Asked and
17 answered.

18 THE WITNESS: Does it say explicit?
19 Does it say explicitly so? I don't believe that
20 it limits it explicitly in that sense.

21 BY MR. CHAN:

22 Q Now, if the rod travels only in a
23 straight line, can it deviate from the center of
24 axis to, say, travel at an angle?

25 MR. BOWEN: Objection. Vague.

ROUGH DRAFT 35

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 THE WITNESS: Well, in this case, you
3 have to be a little more specific. If the rod is
4 a straight item, it doesn't have a curvature on it
5 at all, and the if the rod is the one connected to
6 the piston inside the cylinder, then, of course,
7 it can only move in a straight line.

8 BY MR. CHAN:

9 Q That's what I'm asking. Thank you.
10 If I can turn your attention to the
11 '651 patents again. If you can go to column 5,
12 line 65.

13 Let me know when you're there.

14 A I'm there.

15 Q Now, it reads:

16 "A mechanism useful in adjusting the
17 position of the wafer stage 40 may be comprised of
18 any of a variety of devices, such as pneumatic,
19 hydraulic, electromagnetic or mechanical systems."

20 Do you see that?

21 A I do.

22 Q Is there anywhere in this specification
23 that says a pneumatic cylinder cannot combine any
24 of these mechanisms for moving the wafer stage?

25 MR. BOWEN: Objection. Vague.

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 THE WITNESS: If I -- let me try to
3 rephrase your question better so I can understand
4 it.

5 Is there anywhere in the specification
6 that says that you cannot have a combination of
7 multiple modalities on top of a pneumatic
8 cylinder? Is that what you're asking?

9 BY MR. CHAN:

10 Q Correct. Yes.

11 A There is -- there is not a --

12 (Reporter clarification.)

13 THE WITNESS: -- specific exclusion of
14 that in this specification, if I recall correctly.

15 BY MR. CHAN:

16 Q So in your opinion, can a pneumatic
17 cylinder employ both pneumatic and mechanical
18 mechanisms for moving a wafer stage?

19 MR. BOWEN: Objection. Calls for a
20 legal conclusion.

21 THE WITNESS: The term "mechanical
22 device" here, if used, you know, casually, means
23 everything. Spring, piece of metal, screw, a rack
24 pinion, a motor -- all of these -- and pneumatic
25 and pneumatic cylinder. All of these are

ROUGH DRAFT 37

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 mechanical devices. So can you be a little bit
3 more precise?

4 BY MR. CHAN:

5 Q Well, actually, that's a good segue into
6 your opinion. Maybe I can refer you to paragraph
7 44 of your opinion. Let me know when you're
8 there.

9 A Yes.

10 Q The last sentence of paragraph 44 -- and
11 it reads -- let me know when you're ready.

12 It says:

13 "And the fourth type, a mechanical
14 device, is a device that creates the needed motion
15 through interacting mechanical parts, as, for
16 example, in a rack and pinion configuration."

17 Do you see that?

18 A I do.

19 Q You're not limiting mechanical parts to
20 only rack and pinion configuration; right?

21 A No. I need to give you a longer
22 explanation of that. Because again, context
23 matters.

24 In the previous question, you used
25 "mechanical device" in a very general sense. And

ROUGH DRAFT 38

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 I explained to you that in a very general sense,
3 anything is mechanical. Okay? What I mean here
4 in my declaration, I put it specifically in the
5 context of the specification of the '051 patent
6 where they do make -- the inventors do make the
7 distinction, and they make a listing of the
8 devices and they call out mechanical devices --
9 for example, rack and pinion separately in
10 addition to pneumatic, hydraulic, electromagnetic,
11 and so on. So it is in this context that I use
12 the term "mechanical" here.

13 Q Where can you point me to the
14 specification -- where do you believe the inventor
15 refers to mechanical as only rack and pinion?

16 A Well, I can infer that if we go to the
17 bottom of column 5, paragraph -- line 65. They
18 have a list. Pneumatic, hydraulic,
19 electromagnetic -- all mechanical systems. So
20 they clearly use the term "mechanical" as
21 something to mean other than hydraulic,
22 electromagnetic, or pneumatic. So this is the
23 context I'm referring to.

24 Q Do you see the word "comprised of" in
25 that sentence you just read?

ROUGH DRAFT 39

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 A I do.

3 Q What does that mean to you?

4 MR. BOWEN: Objection. Calls for a
5 legal conclusion.

6 THE WITNESS: It means made of.

7 BY MR. CHAN:

8 Q It means made of?

9 A Uh-huh. In combination for any of these
10 parts.

11 Q Does your definition of "made of"
12 include multiple of those mechanisms?

13 MR. BOWEN: Objection. Asked and
14 answered.

15 THE WITNESS: Yes, it does.

16 BY MR. CHAN:

17 Q Okay. Mr. Spanos, I think we talked
18 about the shaft 49 and the valve 61.

19 Those are mechanical parts; right?

20 A Yeah. People would describe them as
21 mechanical, correct.

22 Q So those mechanical parts -- excuse me.

23 Those mechanical parts are used by
24 pneumatic cylinders; correct?

25 A Sure. Cylinders are made of parts and

ROUGH DRAFT 40

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 people could call those mechanical parts.

3 Q And are you aware that mechanical parts
4 such as the shaft 49 are used in hydraulic
5 applications?

6 A Yes.

7 MR. BOWEN: Objection. Scope.

8 BY MR. CHAN:

9 Q I'm sorry. Can you repeat the answer
10 again, Dr. Spanos?

11 A Yes. They can be used in hydraulic
12 applications.

13 Q And are you aware that mechanical parts
14 such as the shaft 49, again, are used in
15 electromagnetic applications?

16 MR. BOWEN: Objection. Scope.

17 THE WITNESS: Yes. They could be used,
18 even though 49 -- the way figure 2 -- the way it's
19 drawn doesn't show how. But yes, in general, they
20 could.

21 BY MR. CHAN:

22 Q In opining on the construction of the
23 term "pneumatic cylinder," did you consider that
24 hybrid pneumatic mechanical cylinders were readily
25 available at the time of your invention?

ROUGH DRAFT 41

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 MR. BOWEN: Objection. Vague.

3 THE WITNESS: Yes.

4 MR. BOWEN: Go ahead.

5 THE WITNESS: Could you please repeat
6 the question.

7 BY MR. CHAN:

8 Q Sure.

9 In opining on the construction of
10 pneumatic cylinder, did you consider that hybrid
11 pneumatic mechanical cylinders were readily
12 available at the time of the invention?

13 MR. BOWEN: Objection.

14 THE WITNESS: Yes, I was aware of that.

15 THE COURT REPORTER: What's the
16 objection?

17 MR. BOWEN: Vague.

18 BY MR. CHAN:

19 Q What are hydraulic cylinders?

20 A Hydraulic cylinders are devices that use
21 compressed liquid, liquid under some pressure, in
22 order to generate some kind of action, motion,
23 typically.

24 Q So it is different than pneumatic
25 cylinder in that it uses liquid instead of air or

ROUGH DRAFT 42

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 numerical label, 46, to describe hydraulic
3 cylinders and pneumatic cylinders; right?

4 MR. BOWEN: Objection. Misrepresents
5 the document.

6 THE WITNESS: I see they refer to line
7 50, cylinder -- I'm sorry -- the pneumatic
8 cylinder 46 is referred to in line 48 and 49. And
9 then the same numerical element, 46, is used with
10 the term "hydraulic cylinder" near the bottom of
11 this paragraph. I do see that, yes.

12 BY MR. CHAN:

13 Q Have you considered why the inventor
14 used that same numerical label to describe both
15 hydraulic cylinders and pneumatic cylinders?

16 MR. BOWEN: Objection. Misstates the
17 document.

18 THE WITNESS: I have.

19 BY MR. CHAN:

20 Q And what is your conclusion?

21 A I think it's probably a mistake in the
22 way this part of the specification is written.

23 Q Did you consider that the inventor
24 intended that pneumatic cylinder and hydraulic
25 cylinder be interchangeable?

ROUGH DRAFT 44

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 MR. BOWEN: Objection. Objection.

3 Misstates the document.

4 THE WITNESS: The document does not say
5 that they're interchangeable. If they didn't say
6 that, they do have said so explicitly.

7 BY MR. CHAN:

8 Q Are you aware that there were hybrid
9 cylinders that combined pneumatic and hydraulic
10 functions at the time of the invention?

11 A Yes.

12 Q In opining on the construction of
13 pneumatic cylinders, have you considered that
14 hybrid -- excuse me. Strike that.

15 Are you aware that the defendant cited
16 the use of hydraulic actuator in their invalidity
17 contentions as one form of pneumatic cylinder?

18 A I have not studied invalidity
19 contentions so...

20 (Simultaneous colloquy.)

21 BY MR. CHAN:

22 Q So you haven't looked at -- so in forming
23 your opinion, you did not look at defendant's
24 invalidity contentions?

25 A That is correct.

ROUGH DRAFT 45

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 Q Thank you, Dr. Spanos. Let's switch
3 gears to a different patent.

4 Before we do that, do you need a break?
5 I know we are almost at the hour.

6 MR. BOWEN: Sorry, Alex. This does seem
7 this might be a good spot because it seems like
8 you might be moving on to a different subject
9 manner.

10 But, Dr. Spanos would you like to have a
11 break now?

12 THE WITNESS: Sure.

13 (Recess.)

14 BY MR. CHAN:

15 Q Welcome back, Dr. Spanos. Let's switch
16 gears a little bit to the '538 patent. First, let
17 me ask you just a few foundational question.

18 Are you familiar with fault detection in
19 semiconductor manufacturing?

20 A I am.

21 Q In what capacity?

22 A Quite a bit of my research work at the
23 university have to do with fault detection in the
24 statistical process, control and advanced process
25 control. And also, in my interactions within the

ROUGH DRAFT 46

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 you don't know if these claims would cover a
3 situation where a fault is 5 percent out of
4 specification, or it would only cover a situation
5 where a fault is only 10 percent out of
6 specification or a situation where a fault is
7 15 percent out of specification.

8 Do you see that?

9 MR. BOWEN: Objection. Misstates the
10 document.

11 BY MR. CHAN:

12 Q Go ahead, Dr. Spanos.

13 A I'll have to ask you to repeat the
14 question.

15 Q Sure.

16 What I just read, that is your opinion
17 in your declaration; correct?

18 MR. BOWEN: Same objection.

19 THE WITNESS: You read the lines
20 starting, "I do not know, for example"? Is that
21 what you're talking about.

22 BY MR. CHAN:

23 Q Correct.

24 (Reporter clarification.)

25 THE WITNESS: Everything in my

ROUGH DRAFT 49

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 declaration is my opinion. So I stand by that
3 sentence.

4 BY MR. CHAN:

5 Q So is it your opinion that the term
6 "significant" must be quantified to some amount in
7 order to be definite?

8 MR. BOWEN: Objection. Vague.

9 THE WITNESS: It is not. As I say here,
10 "for example." So I just gave one example on what
11 type of information might need to be known for
12 classification, but that might not be the only
13 one.

14 BY MR. CHAN:

15 Q Now, in your declaration, under
16 paragraph 28 -- if you can go there very quickly.

17 A Yes.

18 Q Okay. You said -- and I quote, you:

19 -- "did not find any disclosure that
20 provides a definition, parameters, or other
21 metrics to determine the boundaries of what is or
22 isn't significant."

23 And then in paragraph 29, you said that:

24 "The other example of the word
25 'significant' being used in the specification is

ROUGH DRAFT 50

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 not related to determining whether a fault is
3 significant."

4 Now, other than these examples, did you
5 review any other examples in this specification in
6 forming your opinion?

7 A These examples refer to the entire
8 reading of the specification. When I say that I
9 have reviewed the pattern and not find any
10 disclosure, I mean the entire specification and
11 patent, if I understood your question.

12 Q Well, in paragraph 29, you said that the
13 other example -- so I want to clarify. That is
14 not -- that is or is not the only example that you
15 have reviewed?

16 MR. BOWEN: Objection. Vague.

17 THE WITNESS: What paragraph 29 says is
18 that the term "significant" is used to two
19 different meanings in the specification. One is
20 to -- applying to the significance of the fault.
21 The other applies to the significant contribution
22 of the factor to a significant fault. This is
23 what I'm trying to say in paragraph 29.

24 BY MR. CHAN:

25 Q Thank you for clarifying.

ROUGH DRAFT 51

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 process. I need to know a few things about the
3 sensor that measures the pressure and the
4 variation introduced by the sensor and so on and
5 so forth. In other words, these questions can
6 only be answered with lots of details and context
7 about the process in question because this
8 processes are extremely complex and interact with
9 many, many steps.

10 BY MR. CHAN:

11 Q So using this example in the background,
12 let's just say the acceptable range of the
13 pressure is between 1 to 10 Psi which is ten times
14 more than -- excuse me, 1 to 10 Psi and let's
15 assume that the pressure sense is 100 Psi. Does
16 that inform you there is a significant fault?

17 MR. BOWEN: Objection. Scope. Go
18 ahead.

19 BY MR. CHAN:

20 Q It does?

21 A It does not.

22 Q Let's say the result is 10,000 Psi,
23 which is many more times than the acceptable
24 range.

25 Is it your opinion that this still is

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 not significant?

3 MR. BOWEN: Objection. Scope. Go
4 ahead.

5 THE WITNESS: It is my opinion that I
6 still would not know whether it is significant or
7 not. Even if it is a medium Psi. The reason
8 being is that you have not determined what is the
9 role of pressure in the process, in this
10 particular process. We have not determined the
11 quality of the sensor that might be producing the
12 results. In order to give you an answer, I need
13 to know many more things and of course, the most
14 important thing is in your question, said, is my
15 opinion that this is a significant fault. You
16 have not defined what significant means. That's
17 why I cannot answer this question.

18 BY MR. CHAN:

19 Q Have you ever used the word significant
20 in any context in any of your publications?

21 A Many times.

22 Q Used it many times?

23 And in those occasions, you know why you
24 used that term?

ROUGH DRAFT 55

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 Q Now, in your -- excuse me. Under
3 paragraph 30 of your declaration -- let me know if
4 you're there. Your opinion is that:

5 "The term 'significant' is an exact term
6 I would never use if I had to describe the value
7 of this field with reasonable certainty."

8 Correct?

9 A Correct.

10 Q And you just confirmed that you use the
11 term "significant" in your publication; correct?

12 MR. BOWEN: Objection. Misstates
13 testimony.

14 MR. CHAN: Let's give an example. If I
15 may ask you to go to one of the exhibits. I'm
16 going to need the court reporter to designate this
17 exhibit and mark it as Exhibit 2. This is the
18 exhibit entitled "Engineering Versus Ambient Type
19 Visualization."

20 Let me know when you're there.

21 (Exhibit 2 was marked.)

22 THE WITNESS: Okay. I'm here.

23 BY MR. CHAN:

24 Q Do you recognize this publication?

25 A I do.

ROUGH DRAFT 56

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 output shown in figure 7."

3 Do you see that?

4 A I do.

5 Q And here, why did you use the term
6 "significant" in describing protection of daily
7 aggregate energy use?

8 A Because --

9 MR. BOWEN: Objection. Scope.
10 Go ahead.

11 THE WITNESS: Because here it has a
12 specific meaning. And if I direct you to the
13 abstract --

14 BY MR. CHAN:

15 Q I'm sorry, Dr. Spanos. You got cut out
16 there again. Can you repeat that answer --

17 A I use the term "significant" because it
18 has a specific meaning. And if I direct you to
19 the abstract of the paper.

20 Q Okay.

21 A You might see that the first -- the
22 first time the words significant appears may be
23 1-third from the bottom at the beginning of the
24 line, significant reductions. Do you see that.

25 A Yes.

ROUGH DRAFT 58

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 Q The word proceeding that is
3 statistically significant reductions. In the
4 space where this paper was presented, in fact, in
5 many spaces the word "statistical significance"
6 has a meaning, has a quantifiable meaning.

7 Q So again, I think that sort of -- but I
8 thought earlier you said -- and you can correct me
9 if I'm wrong -- I said you're not trying to
10 quantify the word significance but here you're
11 saying it's quantifiable.?

12 MR. BOWEN: Objection. Misstates
13 testimony.

14 THE WITNESS: Actually --
15 (Reporter clarification.)

16 THE WITNESS: Actually, I'm not saying
17 the term significance is quantifiable. I am
18 saying the term statistical significance is
19 quantifiable. The composite term.

20 BY MR. CHAN:

21 Q Okay. Let's go back to section 3.2.1.
22 Let me know when you're there.
23 Somewhere in the middle of that
24 paragraph it says a category or the y'all
25 available treating each day of the week as an

ROUGH DRAFT 59

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 independent predictor found four of the five
3 weekdays to have insignificant predictive power
4 with respect to the response. And there's a
5 footnote. Footnote four. It says when we say a
6 predictor was insignificant in predicting a
7 response, we use conventional definitions of 5
8 percent significance in a frequent ordinary least
9 square (OLS) framework.

10 Do you see that?

11 A I do.

12 Q Now, does the use of the word
13 significance have anything to do with statistics
14 here?

15 A Are you asking how the word significance
16 is being used in this paper in this instance.

17 Q I'm only asking -- I'm only asking in
18 the context of this paragraph where it says about
19 insignificance predicted power with a footnote
20 actually defining what it means by insignificance.
21 So my question is does the definition of the word
22 significance or insignificance have anything to do
23 with statistics?

24 A Only when it was defined in that way.
25 Not in a general sense. If I'm with my friend in

ROUGH DRAFT 60

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 the street and asking if they have anything
3 significant to say or insignificance news,
4 certainly would not be refer to the fact of
5 significance in the frequenttist ordinary square
6 network; right.

7 BY MR. CHAN:

8 Q I'm sorry. Can you cut out there. Can
9 can can you repeat one more time for me, please?

10 A Yes. I'll be glad to.

11 If I believe here the operation is, if I
12 heard the word significance, should I immediately
13 construe that this is a -- this is a -- referring
14 to a specific formal statistical definition?
15 That's how I understood the question.

16 Did I understand it correctly?

17 Q Yes.

18 A Okay. And my answer is normally, no.
19 If I meet my friend in the street and they tell me
20 that they have some significant use, I will
21 certainly not infer that they used the 5 percent
22 significance level in some kind of statistical
23 framework. I'll take the use of the word to
24 meaning something perhaps important but it's not
25 certainly quantifiable.

ROUGH DRAFT 61

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 Q Okay. Would it be fair to say under
3 footnote four where you define significant to mean
4 5 percent?

5 A The 5 percent that you see there is an
6 accurate number but it requires a little bit
7 longer explanation of what it actually means. And
8 I'll be glad to go into that explanation. But it
9 relates to the type one and type two errors in
10 some hypothesis testing. So this item is a bit
11 esoteric. I'll be glad to talk about it if you
12 want.

13 Q Okay. That's okay.
14 Dr. Spanos, are you aware that you used
15 the term significant or significantly or
16 insignificant more than 18 times in this article?

17 A That's quite likely, yes.

18 Q And do you have any reason to dispute
19 that this term, significant or significantly or
20 insignificance as used by you are not clear as to
21 the meaning?

22 A No, I disagree with that. This paper is
23 placed in a statistical experimental context. It
24 is -- it says so in the abstract. It says so in
25 the footnote that you pointed me to. So it was

ROUGH DRAFT 62

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 very reasonable for the readers to infer that I'm
3 using the term in its formal sense, in its formal,
4 quantifiable sense and the audience is went for
5 that. The forum where the paper was presented was
6 meant for that. So no, I think the term is very
7 clear.

8 MR. CHAN: Thank you. Let's mark the
9 next exhibit as Exhibit Number 3. This is the
10 document labeled segmentation analysis in human
11 centric cyber physical systems using graphical
12 lasso.

13 (Exhibit 3 was marked.)

14 BY MR. CHAN:

15 Q Sorry, Dr. Spanos.

16 Do you recognize this publication?

17 A Yes.

18 Q And are you one of the authors?

19 A I am.

20 Q And this was also published in 2019?

21 A I believe so.

22 Q What is the article about?

23 A This article -- let me refresh my memory
24 a bit if you don't mind. This is dealing again --
25 this is in the emergency space. This is dealing

ROUGH DRAFT 63

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 with cyber physical systems. The application here
3 is smart billings are a complicated system that
4 involves not only computational aspect but also
5 human behavior. That's why we call it human
6 centric cyber physical system. And it is paper
7 about data analysis. Using something known as
8 graphical lasso.

9 Q That explanation is much better than
10 what I can describe to you. There's no page
11 number but several paragraphs above section 6.2 on
12 page 8 of the PDF the photograph that starts with
13 the feature correlations.

14 Do you see that that paragraph?

15 A Section 6.2.

16 Q Right above -- it's that same column,
17 but the first paragraph. That starts with the
18 feature correlations -- yeah, the paragraph that
19 starts with the feature correlations. Do you see
20 that?

21 A I'm sorry. The feature correlations in
22 figure eight. Is that what you're referring to.

23 Q I'm sorry. Can you repeat one more
24 time? I could barely hear.

25 A I'm looking at the entitled 6.2.

ROUGH DRAFT 64

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 Q Right.

3 A And I'm looking at five lines below that
4 title. The sentence starts with "The feature
5 correlations for CLUSTER₃ is shown in figure 8."

6 Is that what you're referring to?

7 Q No, no. It's that column, but if you go
8 all the way up starting at line 5.

9 MR. BOWEN: Alex, is there a way that
10 you can actually share the document using Zoom?

11 THE WITNESS: No, I actually found it.

12 (Simultaneous colloquy.)

13 BY MR. CHAN:

14 Q Okay. Sure. It's that paragraph. If
15 you count five lines down. That starts with a
16 positive correlation.

17 Do you see that.

18 A Yes.

19 Q It reads:

20 "There is a positive correlation between
21 morning time and desk light usage indicating
22 somewhat heedless behavior towards energy savings.
23 The absolute energy savings increase during the
24 breaks and finals, given by positive correlation
25 with total points, but it is not significant as

ROUGH DRAFT 65

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 compared to the amount of energy savings that
3 other players in the game exhibit during the game
4 [sic] period, thus increasing the rank."

5 Now, you use the term "significant" here
6 and I don't see any explanation as to statistics.
7 So the question is why did you use it to describe
8 the amount of energy savings between two groups of
9 players.

10 MR. BOWEN: Objection. Scope.

11 Go ahead.

12 THE WITNESS: It is done in a
13 statistical context but let me explain. The whole
14 term graphical lasso is a fairly advanced method
15 of regression analysis which is of course a formal
16 statistical method. And I believe -- and if I can
17 do a quick search if you don't mind -- if you go
18 to section 6.3, that entitled causal relationship
19 between features you can see again a reference to
20 the 5 percent significance level four lines down
21 so it is defined in a very formal way.

22 BY MR. CHAN:

23 Q Where it says a P value lower than .055,
24 5 percent significance level indicates a strong
25 casual relationship -- casual relationship between

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 the tested features and implies rejecting the null
3 hypothesis H_0 .

4 I do see that.

5 But going back to the very section I
6 referred you to, it says nothing about the P
7 value. It says about the absolutely energy
8 savings; right that it is not significance as
9 compared to the other amount of energy savings
10 that other groups of players have?

11 A Correct. But again, in the paper like
12 this, when you use that term and assert something
13 is not asked and answered the readers will expect
14 you're going to show that in terms of formal
15 statistical analysis. I did not have time to
16 review this paper to tell you exactly what is
17 going on. But I think the paragraph that I
18 pointed to, 6.3, says what is the test you have
19 applied to make those statements about
20 significance or lack thereof.

21 Q But that definition is subsequent to
22 that paragraph. So really at the time of reading
23 this section, the reader will have no idea what
24 that means.

25 MR. BOWEN: Objection. Mischaracterizes

ROUGH DRAFT 67

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 testimony.

3 THE WITNESS: That is incorrect. A
4 reader in this forum of a paper like that would
5 certainly know what that means and they would
6 expect to see the definition of that. So no, I
7 would disagree with that statement.

8 BY MR. CHAN:

9 Q Okay. Now, immediately after what we
10 just read, it says external parameters play a
11 significant role in energy usage behavior of this
12 case [sic].

13 Why do the external parameters play a
14 significant role in energy usage?

15 A Again, significant here means the same
16 definition that I used before, if it's
17 quantifiable established that they do so, now why
18 they do so, it's a matter of this particular
19 experiment. So I don't remember the details,
20 whether the weather or the way people were dressed
21 or many other things might have affected that.
22 This would be external parameters. But they turn
23 out to play a significant role. That's what the
24 experiment said.

25 Q But here the use of the phrase

ROUGH DRAFT 68

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 what I need to do in order to make that
3 determination.

4 Q Let's read the next sentence. In other
5 words, the system 300 determines whether the
6 abnormality or fault indication relays to an
7 actual fault.

8 Did you consider this sentence in
9 forming your opinion?

10 A I have.

11 Q And does this offer you the opinion that
12 it clearly indicates what an actual fault is?

13 MR. BOWEN: Objection. Vague.

14 THE WITNESS: No, it does not. It tells
15 you that some system determines whether the
16 abnormality or fault indicates relates to an
17 actual fault. That to me implies that somewhere
18 out there is a definition of what an actual fault
19 is and the system sees whether the abnormalities
20 or the faculty indications point to that
21 definition but that definition is missing.

22 BY MR. CHAN:

23 Q Dr. Spanos, for a skilled engineer,
24 would there be any issue with respect to
25 identifying whether a fault is an actual fault or

ROUGH DRAFT 83

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 a false positive?

3 A A skilled engineer -- give me enough
4 context and enough information, and given a
5 specific processes to define things, deciding what
6 kind of hypothesis test I need to do. They may be
7 able to classify the fault. But the faults in
8 semiconductor manufacturing do not simply fall in
9 the category of significant or insignificant.
10 It's much more nuanced than that. So that is my
11 whole problem with the definition.

12 Q I understand. But my question is a
13 little different. My question is, for a skilled
14 engineer, will there be any issue in terming of
15 identifying whether there's an actual fault or a
16 false positive?

17 A In a very narrow context with enough
18 information known, I think skilled engineers could
19 do that.

20 Q For a skilled engineer, would there be
21 any issue with respect to identifying whether a
22 fault is an actual fault or a false negative?

23 A I have trouble passing that question
24 because a false negative negatively imply it is
25 absence of a fault or at least of a fault

ROUGH DRAFT 84

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 indication so you are asking me whether a skilled
3 engineer in the absence of any evidence, will they
4 see an actual catastrophe happening in saying, oh,
5 my God, we missed the fault. We had a false
6 negative here. Is that what you're asking.

7 Q That is the question.

8 A Yes. Again, that's a hypothetical, but
9 yes, catastrophes do happen and sometimes they
10 come unannounced so that is certainly possible.
11 Again in an a narrow context with enough
12 information about the process.

13 Q Okay. Thank you for your time,
14 Dr. Spanos. Looks like we're almost up to an
15 hour, again. Let me just stop here and let's take
16 another ten-minute break. After the break, I'm
17 going to have my colleague take over because I
18 have to attend so some other personal matters. So
19 let's take a ten-minute break and resume at 4:20.

20 (Recess.)

21 --oOo--

22 EXAMINATION

23 BY MR. PARKER:

24 Q So Dr. Spanos, my name is Henrik Parker,
25 Rick Parker, I work with Mr. Chan so I'm going to

ROUGH DRAFT 85

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 "The term ultra-thin resist layers (UTR
3 layer) appears explicitly in only claims 1 and 4."

4 Isn't it true that the term appears many
5 other times in the specifications?

6 A Yes. That is true.

7 Q So when you said it appears explicitly
8 only in the claims that wasn't accurate?

9 MR. BOWEN: Objection. Misstates the
10 document.

11 THE WITNESS: The document says not only
12 in the claims but it says in only claims 1 and 4,
13 my intention is to say in the context of the
14 claims, these are the only two instances where you
15 can find this term.

16 BY MR. PARKER:

17 Q At the end of the second sentence of
18 paragraph 48, you say -- you say so that UTR layer
19 refers to resist layers having thicknesses that
20 would have been considered very thin at the time
21 of the invention.

22 Does your use of have in that steps, are
23 you using that in the same way as ultra thin or
24 actually just ultra?

25 MR. BOWEN: Objection. Vague. Go

ROUGH DRAFT 97

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 ahead, Dr. Spanos.

3 THE WITNESS: No, this is just a
4 description of what ultra-thin resist are. I use
5 the term "very thin" in comparison to regular
6 resist that are used as a single layer of
7 photolithography. Ultra-thin resist are usually
8 viewed in that context are very thin. So I
9 would --

10 (Reporter clarification.)

11 THE WITNESS: So I was just describing
12 it in plain words.

13 BY MR. PARKER:

14 Q When you said very thin at the time of
15 the invention in paragraph 48, what did you mean
16 by "very thin"?

17 MR. BOWEN: Objection. Asked and
18 answered.

19 THE WITNESS: I meant thinner than what
20 you will have in a resist used as a single -- for
21 a single layer patterning.

22 MR. PARKER: I'm sorry. Cheryl, can you
23 read back that answer, please.

24 (Record read.)

25 ///

ROUGH DRAFT 98

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 BY MR. PARKER:

3 Q In your experience with an ultra-thin
4 resist coating be the same thing as an -- sorry.
5 Let me start over again.

6 In your experience, would an ultra-thin
7 resist coating be an ultra-thin resist layer?

8 A Yes, I believe they're used with the
9 same meaning.

10 Q And that would be true in the context of
11 the '097 patent as well?

12 A Yes, I think so.

13 Q In paragraph 49 of your declaration, you
14 say -- the second sentence says claim one does not
15 specifically any resist thicknesses.

16 Do you see that?

17 A That is correct. Yes.

18 Q Does that mean in your opinion that the
19 resist as claimed in claim one could be any
20 thickness and still fall within the scope of claim
21 one?

22 MR. BOWEN: Objection. Misstates the
23 document. Go ahead.

24 THE WITNESS: That sense does not mean
25 that. So that's not my opinion.

ROUGH DRAFT 99

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 not agree to that, no.

3 Q Where in the '097 patent are there
4 ultra-thin resist layers discussed as having
5 thicknesses that are greater than -- or -- equal
6 to or greater than 2500 angstroms?

7 A In the specification, it states that
8 normal resist for UV lithography is
9 4,000 angstroms. For regular lithography, it's
10 5,000 angstroms. And these things that lower
11 thicknesses are considered ultra thin.

12 Q Where does does it say that lower
13 thicknesses are considered ultra-thin?

14 A If we can go to the part of the
15 specification. In fact I think it's being
16 discussed in paragraph 52 of my declaration. What
17 I'm stating there in the sentence: The pattern
18 describes a standard resist thickness of 5,000 or
19 more, or 248 nanometer lithography and 4,000
20 angstroms. I would assume that anything below
21 that would qualify.

22 Q And why do you make that assumption?

23 A Well, from my general knowledge about
24 the subject matter and also reinforced by
25 references from the very same inventors in

ROUGH DRAFT 101

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 different patterns that actually freely defined
3 ultra-thin resist thicknesses in that range.

4 Q Okay. But the question I asked you
5 earlier was, were there any specific statements in
6 the '097 patent describing an ultra-thin resist
7 layer as being equal to or greater to 2,500
8 angstroms. And is it your position that the one
9 sentence that you just read from column one lines
10 39 to 43 describes such an embodiment?

11 A Let me go to column one, lines what
12 again.

13 Lines 41 to 43.

14 Q It's the lines that you cited in
15 paragraph 52?

16 A Yes. I think to me that's a strong
17 indication that this pattern does not exclude the
18 possibility of ultra-thin resist being in those
19 ranges.

20 Q Okay. That wasn't my question. My
21 question is, is there any discussion in here of an
22 embodiment that is more than -- equal to or
23 greater than 2,500 angstroms?

24 MR. BOWEN: Objection. Asked and
25 answered.

ROUGH DRAFT 102

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 Go ahead.

3 THE WITNESS: It's not explicit.

4 There's not an explicit discussion about that.

5 BY MR. PARKER:

6 Q If the '097 patent was identical in all
7 respects except that it did not include claim
8 four, would you be able to construe the term
9 ultra-thin resist layer in claim one?

10 A I have not done this analysis. I did
11 this analysis in the presence of claim four. So I
12 will have to give it some thought before I answer
13 to you.

14 Q Go right ahead.

15 A Okay. Your question is in the absence
16 of claim four. Could you repeat.

17 Q If claim four was not in the patent, so
18 all you had was claim one just written as it is
19 now, discussing an ultra-thin resist layer, would
20 you be able to construe that term as used in the
21 patent?

22 MR. BOWEN: Objection. Scope. Calls
23 for speculation.

24 THE WITNESS: Speculation indeed.

25 Right. I would have to think about it. I can

ROUGH DRAFT 103

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 tell you that it's still vague. The definition
3 that I see here -- you know, we know that
4 specifications do not impose limitations that are
5 examples of embodiments? Right. And not having a
6 limitation on claim one, I would still have a
7 single problem. But again, I haven't put in the
8 thought that it deserves.

9 BY MR. PARKER:

10 Q In paragraph 57 of your declaration, you
11 discuss a couple of other patents that aren't
12 directly involved in these actions; right?

13 A Correct.

14 Q And I believe you were e-mailed those
15 two patents. I'd like you to look at the one -- I
16 think it's entitled DI40-20 -- it says Exhibit 18
17 at the end of the name. It should be U.S. patent
18 No. 6326319?

19 A I have it.

20 Q Was it correct that that was the right
21 file that pulled up that patent?

22 A You were.

23 Q And it's got a cover page saying
24 Exhibit 18.

25 How did you go about finding the two

ROUGH DRAFT 104

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 declaration, I'm looked at column 1, 47 to 50.

3 Q Okay.

4 Q Now, if you would turn to that, column
5 one of the 319 patent, Exhibit 4, I'd actually
6 like you to start a few lines earlier at 39 of
7 column one through the end of that paragraph
8 online 45.

9 A Yes.

10 Q And this is -- actually.

11 It's your opinion that the language in
12 column one of the 319 patent, Exhibit 4, as you
13 say in your declaration, identifies an upper limit
14 for UTR thickness of 2500 angstroms?

15 MR. BOWEN: Objection. Misstates the
16 declaration.

17 THE WITNESS: This particular patent, to
18 language you had is identical to the language of
19 the patent -- the main patent we're discussing and
20 it specifically says, you know, in so many
21 words -- I don't think it defines the limit. I
22 think it gives us a range within which somebody
23 will call the layer characterized as an
24 ultra-thin. It doesn't not tell us what it is
25 not. It does not put a limit on it.

2 BY MR. PARKER:

3 Q But your declaration says it identifies
4 an upper limit for UTR thickness of
5 2500 angstroms; correct?

6 A Correct.

7 Q Is it your understanding that someone
8 construing a claim should not look at extrinsic
9 evidence if the intrinsic evidence sufficiently
10 informs a person of ordinary skill how to construe
11 a given claim for him?

12 MR. BOWEN: Objection. Calls for legal
13 analysis.

14 MR. PARKER: I'm asking for his view.

15 THE WITNESS: I have seen the
16 definition, yes.

17 BY MR. PARKER:

18 Q Okay. But my question is, is that your
19 view?

20 MR. BOWEN: Objection. Calls for a
21 legal conclusion.

22 THE WITNESS: It's my view whether -- if
23 a patent all all its intrinsic evidence, meaning
24 specification, wrapper, and claims and so on, if
25 it's sufficient, then I should not look for

2 extrinsic evidence. If that patent informs me
3 completely, yes. The question is that this one
4 does not.

5 BY MR. PARKER:

6 Q What is your understanding of the
7 doctrine of claim differentiation?

8 MR. BOWEN: Objection. Calls for legal
9 analysis.

10 THE WITNESS: My general understanding,
11 not having legal training is its claim has to add
12 something that other claims do not have. They
13 have to be different. They have to be covering
14 different things.

15 BY MR. PARKER:

16 Q Is it your understanding that the
17 doctrine should always be followed when construing
18 claims?

19 A I do not know the legal answer to that.
20 My common sense understanding is yes, it should
21 be.

22 MR. PARKER: I don't have any further
23 questions.

24 MR. BOWEN: I think we should take a
25 break.

** ROUGH DRAFT * NOT CERTIFIED * NOT TO BE CITED AS ORIGINAL TRANSCRIPT **

2 THE COURT REPORTER: Off the record?

3 (Recess.)

4 MR. BOWEN: So the defendants don't have
5 any questions for Dr. Spanos, but they do reserve
6 the right to read and sign.

7 THE COURT REPORTER: Anything else?

8 MR. PARKER: I don't think so.

9 MR. BOWEN: Not from us. Let me ask the
10 other defense counsel -- does anybody have
11 anything else?

12 Looks like we don't.

13 Thanks Cheryl.

14 Thanks, Dr. Spanos.
